

Silverlab assists those with health conditions to achieve swift and lasting relief, unleashing you into a life of health and renewed vigor.

Bringing you healing, Promoting your health

***Silverlab* Colloidal Silver helps to normalize your body's immune system at a cellular level due to its anti-inflammatory properties. ***

Why does Silverlab Colloidal Silver help with the treatment of:

Coronavirus?
HIV Aids?
Swine Flu?
Bird flu?
The common cold & flu?
Auto immune conditions?
Systemic or Mycelial Candida albicans?

The **anti-inflammatory** properties of Silverlab Colloidal Silver help to normalize the body functions at a cellular level, which we refer to as **immune-modulation**. This then allows the body's own immune system to focus on dealing with the pathogens. It also helps to deal with any **secondary infections**.

We have had many testimonies from people who have used **Silverlab Colloidal Silver** to help them overcome various viral and other conditions. Some of them had given up all hope of recovery from their condition. These same people are now reporting that they are now living a normal life.

Silverlab Colloidal Silver is available from us through our **Online shop**, and at **Dis-Chem**, selected **Clicks stores**, leading **Pharmacies**, **Health Shops**, **Wellness Warehouse** and **Takealot.com** throughout South Africa. Please see our website or phone 011 794 5380 for more information www.silverlab.co.za

Silverlab Colloidal Silver is a **Liquid** that is taken orally. It may be used concurrently with any other medication. There have been no adverse reactions reported.

It is becoming clear that it is the anti-inflammatory properties of our ionised silver that is beneficial for the treatment of the above conditions.

Suggested use for Coronavirus: Silverlab colloidal silver Liquid is not to be diluted in water. It is to be held in the mouth for about 2 minutes before swallowing; this allows the Silver ions to bond onto the enzymes (saliva) to form a metallo-protein for transportation to the relevant cells.

The recipient is to drink sufficient potable (clean) water throughout the day. The normal 8 glasses (2 litres) per day is fine.

Power-Dosing with Silverlab ionic colloidal silver liquid:

Day 1: 20ml every half hour for 12 hours (24 doses =480ml)
Day 2 to 14: 20ml morning and evening, half an hour before meals. (520ml)
Day 15: 20ml every half hour for 12 hours (24 doses =480ml)
Day 16 to 28: 20ml morning and evening, half an hour before meals. (520ml)

It is most likely that you could stop the Power-Dosing at this point for most health conditions including Corona virus. From Day 29 it is advisable to go onto the maintenance dose of 20ml twice per day.

For immune-compromised clients, please continue with treatment for a full 3 to 4 months as follows:

Day 29: 20ml every half hour for 12 hours (24 doses =480ml)
Day 30 to 42: 20ml morning and evening, half an hour before meals. (520ml)
Day 43: 20ml every half hour for 12 hours (24 doses =480ml)
Day 44 to 56: 20ml morning and evening, half an hour before meals. (520ml)
Day 57: 20ml every half hour for 12 hours (24 doses =480ml)
Day 58 to 70: 20ml morning and evening, half an hour before meals. (520ml)
Day 71: 20ml every half hour for 12 hours (24 doses =480ml)
Day 72 to 84: 20ml morning and evening, half an hour before meals. (520ml)
Day 85: 20ml every half hour for 12 hours (24 doses =480ml)
Day 86 to 98: 20ml morning and evening, half an hour before meals. (520ml)
Day 99: 20ml every half hour for 12 hours (24 doses =480ml)

The above is based on a 70 kg person and uses 7.5 litres colloidal silver over a 3-month period.

See doses for other body weights on the following page.

100kg and above	= 25ml per dose; Total 9.4 litres
70kg to 99kg	= 20ml per dose; Total 7.5 litres
60kg to 69kg	= 17ml per dose; Total 6.5 litres
50kg to 59kg	= 15ml per dose; Total 5.7 litres
40kg to 49kg	= 12ml per dose; Total 4.5 litres
30kg to 39kg	= 10ml per dose; Total 3.8 litres

According to the World Health Organization (WHO), one can safely take in 8 liters of ionic colloidal silver per year over a 70-year period. This is calculated for a person with an average weight of 70kg. (This means that if you didn't have your full 8 litres last year, you can double up this year.)

Tests have shown that ionic colloidal silver kills harmful microorganisms, but not beneficial organisms such as those found in the gastro-intestinal tract.

Complementary Medicine

This medicine has not been evaluated by the South African Health Products Authority (SAHPRA).

Relevant references: Among many positive outcome studies, a review study in the Journal of Nanobiotechnology concluded that ionic silver nanoparticles function as broad spectrum viricidal and bactericidal agents, and in addition, increase wound healing. Another review study in the Molecules Journal states that the use of metal nanoparticles provides an interesting opportunity for novel antiviral therapies. Seeing that metals may attack a broad range of targets in the virus, there is a lower possibility to develop resistance.
